When You Spend \$10.00...

Those people who still think that business keeps, as profit, a large part of the money it takes in from its customers should be interested in a report by the American Economic Foundation showing what happens to the dollars we spend at retail.

Suppose you go into a store and buy \$10.00 worth of goods. On the average, here's where the money goes:

Cost of the merchandise, with transportation, rent and other overhead expenses comes to \$8.02. Wages and salaries account for \$1.31. Taxes total 38 cents, and depreciation of physical equipment such as buildings and fixtures requires 7 cents. This leaves a mere 22 cents out of that \$10.00 of yours—and that is the storekeeper's profit. Not all of this remains in the pockets of the owners. In typical large stores, for example, in a recent period, only 14 cents of it was paid out in dividends, the remaining 8 cents being reinvested in the business, to enable it to meet the competition and keep up with the march of progress.

One sure deduction can be made from these figures. If store owners earned no profit at all, you, the consumer, would hardly notice the difference in the prices you pay for goods.

Keep This A Land Of Opportunity...

Writing in Nation's Business Secretary of the Treasury Humphrey says that more tax cuts are essential. He adds: "This nation, as the land of opportunity for the young—eager for work and ambitious to better themselves—cannot long endure as such under the restrictive taxes which we inherited. They must be further reduced."

The nation has seldom heard so unequivocal a

statement from an official in so responsible a position. It should be as welcome as a gust of fresh air in a smoke-filled room. And every American should pledge himself to support the government's present efforts to reduce costs—even though he may feel a temporary pang in his own pocket. Here is a case where the character, courage and patriotism of the American people will be thoroughly tested.

indirectly connected with trout
fishing.

An experiment was run over a
period of 3 years on several
streams in the lower peninsula,
to determine how many trout
would die if caught on flies or
bait and then released. A number
8 long shank hook was used on
bait, various sized hooks on flies.
This work was done under the
supervision of Dr. Leonard Allison
and Dr. David Shetter of the
Conservation Department, both
reliable men. This was figured on a
percentage basis.

Last year 193,000 sportsmen
bought Trout stamps in Michigan.
This year we can expect 193,000
to buy them.

If 193,000 fishermen went fish-
ing for one weekend. Caught and
released 5 under sized fish a day
or ten in the two days. (This is a
conservative estimate.) They
would catch 1,950,000 fish.

In other words we are killing
more than 6 times as many trout
on bait as we are on flies.

Gentlemen, we need these trout
in our streams. If they were al-
lowed to live another year a large
percentage of them would be le-
gal and would wind up in some
fisherman's creel.

In the streams of the lower
peninsula there has in the last
five years been a rapid decline
in the trout population, due main-
ly to Rod pressure and more ex-
perience in the men using them.

Our hatcheries are running at
full capacity and can't keep up.

Did you ever notice how fast
the coal pile disappears when you
get down to the last ton. That's
where the trout fishing is today,
and unless something drastic is
done, not in 57 or 60, but now, it
will be worse. Your trout dollars
will go else where, and you will
be left holding the bag.

Last year, 1933, the department
planted in the AuSable Watershed
down to the Mio Pond, 56,352 legal
trout. By the end of the season
very few of them were left. We
harvested 75 percent of our natu-
ral increase as well.

Gentlemen, we are going to
have to do everything possible to
rectify this condition. We are all
going to have to give up some-
thing. Creel limits must be small-
er, length limits will have to be
longer, and we must quit killing
our undersized fish, no matter
what does we tread on.

What do you think?

Remember way back when going to the hospital was a last resort?

How times change! Look how great our confidence in hospitals
is today! What a tremendous contribution they make to
better health for everyone. Yet, this is only the beginning...

Today, you can expect to live longer! And
when you do get sick, you can expect to recover
faster, with less suffering... thanks to tre-
mendous advancements in modern medical
science. And with these advancements has come
a dramatic change in the way people feel about
going to the hospital.

The new way to pay hospital and doctor bills

It began in 1938 when the hospitals and doctors
organized Michigan's Blue Cross - Blue Shield,
which offer a kind of protection against hospital
and medical bills that you can get in no other
way. What is the Blue Cross - Blue Shield idea?

1. First, it is protection for everyone in Michigan,
at a cost so low that no one can afford to be
without it, no matter how modest his income.

2. Second, it is adequate protection. When you
can't predict the cost of sickness or accident,
what is adequate protection? Not necessarily
protection that gives you a certain amount of
money (it might not be enough). But protection
is adequate if it pays off in services
(sometimes unlimited) rather than in dollars.

These two objectives comprise the basic Blue
Cross - Blue Shield idea.

Adequate protection at low cost

Blue Cross - Blue Shield alone can offer ade-
quate protection at low cost because of the unique
way in which they operate. First, by operating
more like a public service than as a commercial
enterprise... and second, by operating on a
non-profit basis. Every penny received from
members is set aside for member benefits, after
nominal business expenses are deducted. Last
year, these were only about 5 cents on the dollar.

Safeguarding low cost

Another way Blue Cross - Blue Shield can
maintain adequate protection at low cost, is by

members is set aside for member benefits, after
nominal business expenses are deducted. Last
year, these were only about 5 cents on the dollar.

Safeguarding low cost

Another way Blue Cross - Blue Shield can
maintain adequate protection at low cost, is by

being extremely liberal on necessary hospital
expenses, but extremely "hard-nosed" about
personal and non-sickness expenses.

Necessary expenses concern hospital bed and
board, and necessary "extras" like operating
room, drugs, laboratory fees, etc.

Personal expenses, such as phone calls, read-
ing materials, etc., are simply not covered. Nor
are non-sickness expenses, like medical check-
ups which could just as well be performed
without confining the patient to a hospital bed.
Paying for these non-essential expenses would
force costs and rates so high that too many
people could not then afford Blue Cross -
Blue Shield.

How Blue Cross - Blue Shield protect you

Blue Cross Comprehensive Group Plan covers a
wide range of necessary hospital services in full... for as many as 120 days of hospital
care at over 200 Michigan Blue Cross-participat-
ing hospitals.

One Blue Shield Plan covers medical-surgical
care in full for families earning less than \$5,000 a
year (\$3,750 for individuals), when enrolled mem-
bers are treated by a Blue Shield-participating
physician. Another plan covers families earning
less than \$2,500 a year (\$2,000 for individuals).
But regardless of income, Blue Shield helps pay
your doctor bill on over 5,000 medical-surgical
procedures when your doctor has to visit you in
the hospital.

How to get Blue Cross - Blue Shield

The cost is low... mere pennies per day! Ask
your employer or union representative. Check
your Farm Bureau. Contact your nearest Blue
Cross - Blue Shield office. Remember, chances
are 1 in 3 that your family will need this pro-
tection within the year.

Ford presents two new deep-block engines

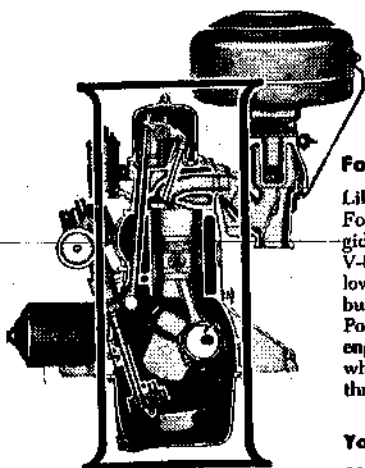

They're the industry's most modern engines with free-turning Overhead Valves and integral valve guides... high-compression, low-friction design... and extra deep-skirted crankcases. Both engines are designed for long life with smooth, economical performance.

Ford's new 130-h.p. V-8 block V-8

This new Overhead-Valve V-8 has an extra-deep block which resembles a "Y" in cross-section. This new deep-block design means greater rigidity for smoother, quieter performance... longer engine life. Other features which make this engine a long-lived, smooth, savingful performer are: new low-friction (short-stroke) design, Free-Turning Overhead Valves, new 5-bearing crankshaft, and new high-turbulence combustion chambers.

Check the extra dividends in the '54 FORD Your Ford Dealer invites you to inspect and Test Drive Ford's new dividends for '54. You'll find new, smooth-riding Ball-Joint Front Suspension... a new, stronger frame... 3 optional power seats... beautiful new styling, inside and out. They're all reasons why Ford's the one fine car in the low-price field.

*Available on extra cost

**Ford's new 115-h.p. I-block SIX**

Like the new V-8 block V-8, this engine has Ford's deep-block design for greater rigidity, longer engine life. Also, like the V-8, you get Ford's modern manifold, low-friction design, high-turbulence combustion chambers, and Ford's Automatic Power Pilot. One advantage of both new engines is an amazingly flat "torque curve" which gives you top pick-up power through the whole range of driving speeds.

You are cordially invited to come in and Test Drive the
